

Employee data.

01/10/2026

Emp Code	Employee Name	Address	City	Region	Department	Basic
1	JP Kumar	Andheri	Mumbai	W	Training	₹10,000
2	Anjali Thakur	Golindpur	Delhi	N	Accounts	₹12,000
3	Priya Agarwal	Sector 9		N	Marketing	₹11,250
4	R Varu	Egmore	Chennai	S	R&D	₹12,000
5	Sanjay Gupta		Delhi	N	Training	₹16,250
6	Tharna Biswal	Link Road	Cuttack	E	Accounts	₹6,400
7	Prakash Dutta	Elgin Road	Kolkata	E	Marketing	₹4,500
8	Manisha	Alipore	Kolkata	E	R&D	₹6,275
9	Arijun Jain		Bng	S	Accounts	₹8,750
10	Arijun		Bng	S	Accounts	₹6,250
11	Abbas	Jaynagar	Bng	S	Marketing	₹11,250
12	Shahid Khan	M.G. Road	Mangalore	S	R&D	₹10,000
13	Anupam	Golindpur	Mysore	S	Training	₹16,250
14	Ashwini	Sector 9	Mangalore	S	Accounts	₹6,400
15	Prateek	North Road	Delhi	N	Marketing	₹4,500
16	Sukanya		Mangalore	S	R&D	₹6,275
17	Satish Puri	Bandra	Mumbai	W	Operation	₹6,250
18	Anjum	Welli	Mumbai	W	R&D	₹8,750
19	Akram	SPB Road	Pune	W	Operation	₹11,250
20	Manish	LLR Road	Noida	N	Training	₹10,000

Calculate the basic salary

→ The sum of the basic salary amounts received by an employee over a specified period

Syntax:- =SUM(number1, [number2],...)

eg:- =SUM(G2:G21)

Result:- ₹1,84,600

Calculate average salary

→ The sum of all salaries divided by the number of employees

Syntax:- =AVERAGE(number1, [number2],...)

eg:- =AVERAGE(G2:G21)

Result:- ₹9230

Calculate maximum salary

→ The highest salary value among a given range of employees

Syntax:- =MAX(number1, [number2],...)

eg:- =MAX(G2:G21)

Result:- ₹16,250

Calculate minimum salary

→ The lowest salary value among a given range of employees

Syntax:- =MIN(number1, [number2],...)

eg:- =MIN(G2:G21)

Result:- ₹4500

Count number of employees

→ Counts the total number of employees in a given range

Syntax:- =COUNT (value1, [value2], ...)

Eg:- =COUNT (G2:G21)

Result:- 20

Count number of employees by name

→ Counts the number of employee names present in the employee name column

Syntax:- =COUNTA (value1, [value2], ...)

Eg:- =COUNTA (B2:B21)

Result:- 20

Find the 2nd largest maximum salary

→ Finds the second highest salary after removing duplicate salary values using the LARGE and UNIQUE function

Syntax:- =LARGE (array, k)

Eg:- =LARGE (UNIQUE (G2:G21), 2)

Result:- 12000

Find the 3rd smallest minimum salary

→ Finds the lowest salary after removing duplicate salary values using the UNIQUE and SMALL functions

Syntax:- =SMALL (array, k)

Eg:- =SMALL (UNIQUE (G2:G21), 3)

Result:- 6275

Find total salary of marketing team

→ Calculates the sum of salaries for all employees belonging to the marketing department

Syntax: =SUMIF(range, Criteria, [Sum-range])

eg: =SUMIF(F2:F21, "Marketing", G2)

Result: 31500

Find the total salary of employees who are earning 10,000

→ Calculates the total salary of all employees whose salary is exactly £10,000

Syntax: =SUMIF(range, Criteria, [Sum-range])

eg: =SUMIF(G2:G21, 10,000, G2:G21)

Result: £30,000

Find the total salary of employees who are earning above 10,000

→ Calculates the total salary of all employees whose salary is greater than £10,000

Syntax: =SUMIF(range, Criteria, [Sum-range])

eg: =SUMIF(G2:G21, ">10,000", G2:G21)

Result: 90250

Find the average salary of west region employees

→ Calculates the average salary of employees whose region is west

Syntax:- = AVERAGE (range, Criteria, [average - range])

Eg:- = AVERAGE (E2:E21, "W", G2:G21)

Result:- 8500

Find the maximum salary in R&D department

Finds the highest salary among employees who belong to the R&D department

Syntax:- = MAXIFS (max - range, Criteria, range1, Criteria1, [Criteria - range2, Criteria2], ...]

Eg:- = MAXIFS (G2:G21, F2:F21, "R&D")

Result:- 12000
