

Find the first 'A' position in the name 26/09/2024

The FIND function finds the position of the first occurrence of a specific character in a name (find is case sensitive)

Syntax :- =FIND("A", A2) or

=FIND(find text, within_text)

Eg: If A2 = "RAHUL"

=FIND("A", A2)

Result = 2

Search function

The search function finds the position of a specific character or text within a cell. It is not case-sensitive

Syntax :- =SEARCH(find text, within_text)

Eg If A2 = "Rahul"

=SEARCH("a", A2)

Result = 2

Derive first name from the cell.

To extract the first name from a cell containing a full name, use the left and search functions.

Syntax :- =LEFT(text, FIND(" ", text) - 1)

Eg: If A2 = "Rahul Sharma"

=LEFT(A2, SEARCH(" ", A2) - 1)

Result :- Rahul

Derive second name from the cell

The second-name formula extracts the text appearing after the first space in a cell containing a full name

Syntax :- =Mid (text, find (" ", text) + 1, LEN (text))

Eg :- If A3 = "Rahul Sharma"

=Mid (A3, find (" ", A3) + 1, LEN (A3))

Result = Sharma.

Derive full name

To Combine the first name and second name stored in two different cell into one full name, use the & operator & CONCAT function

Syntax :- =CONCAT (text, " ", text2)

A2 (First name)	B2 (Second name)
Rahul	Sharma

Eg :- =CONCAT (A2, " ", B2)

Result & Rahul Sharma

Replace the letter 'a' by @ symbol

The replace function replaces a specific number of characters in a cell with new-text, based on their position (or)

The substitute function replaces a specific character of text with another character or text in a cell

Syntax :- =SUBSTITUTE (text, old-text, new-text)

Eg If A2 = "Arun"

=SUBSTITUTE (A2, "A", "@")

Result = @run.
