Result If basic salary is 10000
100

Net salary

It is a combination of basic salary + DA + HRA

Syntax := SUM (number1, [number 2], ...)

Eg := SUM (G12: J2)

If basic salary is 1000 + DA of 800 + HRA of 1296

Result:- 12096

gross salary

gross salary is a combination of PF + Tax + net salary

Syntax := Q4 + N4 + O4

Result:- 19495

Financial functional questions

principal amount = -46000

Rate of interest = 9.00%

Time = 5

FV (Future value) = FV (C1, D1, B1)

Syntax := FV (rate, nper, pmt, [pv], [type])

Result:- 70.776

1. Mr. Sunil purchased a hero honda Karizma for Rs 65000 by taking a loan from ICICI Bank, repayable in 3 years by monthly installments with interest @ 8.5% pa. Calculate the EMI for the loan

→ given $PV = 65000$
 $Rate = 8.50\%$

$Time = 3$

$PMT = ?$

Syntax = $PMT(rate, nper, pv, [FV], [type])$
= $PMT(C2/12, D2*12, B2, 0)$

Result = ₹ -2051.89

2. Mr. Sunil wants to know the PMT in the EMI for 1st month
- given $PV = 65000$
 $Rate = 8.50\%$

$Time = 3$

$PPMT = ?$ (per principal amount)

Syntax = $PPMT(rate, per, nper, pv, [FV], [type])$
= $PPMT(C3/12, 1, D16*12, B16)$

Result = -1,591

3. Mr. Sunil wants to know the interest amount in EMI for 1st month

→ given $PV = 65000$
 $Rate = 8.50\%$

$Time = 3$

$IPMT = ?$

$$\text{Syntax:} = \text{IPMT}(\text{rate}, \text{per}, \text{nper}, \text{pv}, [\text{fv}], [\text{type}])$$

$$= \text{IPMT}(C4/12, 1, D4*12, B4)$$

$$\text{Result: ₹-460.42}$$

4. Ms meenakshi has a fixed deposit of 25000 in HDFC bank for 5yrs on which interest given by the bank is 8.25%. Calculate the maturity value

$$\rightarrow \text{given } PV = -25000$$

$$\text{Rate } 8.25\%$$

$$\text{Time} = 5$$

$$FV = ?$$

$$\text{Syntax} = \text{FV}(\text{rate}, \text{nper}, \text{pmt}, [\text{pv}], [\text{type}])$$

$$= \text{FV}(C5, D5, , B5)$$

$$\text{Result} = ₹37,160.33$$

5. Ms Rita is having the option of going for RD in which amount payable per month is Rs 1200, interest @ 7.5% and the period of deposit will be 5yrs. She asked you to calculate the maturity value

$$\rightarrow \text{given } RD = -1200$$

$$\text{Rate} = 7.50\%$$

$$\text{Time} = 5$$

$$FV = ?$$

$$= \text{FV}(C5/12, D5*12, B5)$$

$$\text{Result: ₹ 87,032}$$

6. Mr JP wants to invest in a plan where he will pay Rs 1476 quarterly for 10 yrs to get a maturity value of 80,000. He wants you to calculate the rate of interest.

⇒ given $PV = -1476$

Time = 10

FV = 80000

Rate = ?

Syntax = RATE (nper, pmt, PV, [FV], [type], [guess])

= RATE (C6*4, B6, D6)

Result = 10.5%.

7. Before opting for the plan with the rate calculated above & for the same period and maturity. Mr JP now wants to know the present value of the investment.

⇒ given Time = 10

FV = 80000

Rate = 10.50%.

PV = ?

Syntax :- = PV (rate, nper, pmt, [FV], [type])

= PV (D7, B7*4, C7)

Result :- ₹-1476.05

8. Mrs Biri wants to go for a RD scheme in any bank with an amount of Rs 1520/- per month where the interest is payable @ 7.5% per annum. She needs your help in finding the no of installments she

has to pay to get a maturity value of Rs 50000

⇒ given RD = -1520

Rate = 7.5%

FV = 50000

nper = ?

Syntax = NPER (rate, pmt, pv, [fv], [type])
= NPER (C8/12, B8, D8)

Result = 30

Annually = 30/12

= 2.5

Result = 2.500726627 ~ 2.5
